

IAM services at TCS

IAM services at TCS

TCS offers a range of IAM services designed to address the evolving cybersecurity needs of modern enterprises:

- **IAM readiness assessment:** Evaluating organisations' IAM readiness to lay the groundwork for a robust IAM strategy.
- **IAM solution design:** Designing customised IAM solutions tailored to unique business processes and security requirements.
- **IAM platform implementation:** Providing end-to-end support in implementing IAM platforms, ensuring secure access to digital resources.
- **Single sign-on (SSO) integration:** Streamlining authentication processes with seamless SSO integration.
- **Access governance and compliance:** Establishing access control policies, role-based access control (RBAC), and access reviews to meet compliance requirements.
- **Identity as a service (IDaaS):** Simplifying identity management in the cloud for secure access to cloud-based resources.
- **Managed IAM services:** Offering ongoing monitoring and maintenance of IAM platforms, incident response, and security updates.

Why clients choose TCS for IAM:

- **Expertise:** A team of IAM specialists brings extensive knowledge to every project.
- **Customisation:** Tailored solutions to organisations' specific needs.
- **Security:** TCS prioritises the security of digital assets and data.
- **Compliance:** Solutions that align with industry regulations and compliance standards.
- **Innovation:** TCS stays at the forefront of IAM technologies and threats, providing innovative solutions.

TCS is a partner for building and maintaining a strong IAM strategy, enhancing security, and empowering organisations in the digital age.
