IMPORTANT!

How to Create a Strong Password

Number 1

Don't Reuse Password

Never use the same Passoword twice because if ever one of your account gets compromised then attacker will try to use those credentials at other palces as well

Number 2

Use a Password Manager

If you can't remember your password then use a Password Manager But that should be Reliable .Dont use any password manager ,do your research.

Number 3

Don't Use Personal Information

Avoid Using Password with terms that are associated to you or your family somehow like your DOB ,attackers know that very well and will try that password if they try to compromise your account.

Number 4

Use MFA

Always try to have Multi Factor Authentication for all your account which includes the combination of something you have and something you are/know. It adds another layer of security to your account.

Number 5

Use MFA

Always try to have Multi Factor Authentication for all your account which includes the combination of something you have and something you are/know. It adds another layer of security to your account.

Number 6

Use Passphrase

Passphrases are made up of four or more random words making them longer than a traditional password. This makes them harder to guess but easy to remember.
